

St. Louis County Solid Waste Department
Appliance Storage Policy
November 16, 2001

Appliances delivered to solid waste disposal sites are to be stored in three separate groups, depending on the type of appliance. The three groups are:

1. Refrigerators, freezers, and pop machines (doors must be removed)
2. Air conditioners, de-humidifiers, water fountains, & ice machines.
3. All other appliances including stoves, ranges, ovens, microwave ovens, dishwashers, trash compactors, furnaces, washing machines, clothes dryers, water heaters, vending machines, and hot water heaters. Sites that choose to do so may provide a separate area for hot water heaters.

Note that water pressure tanks, and humidifiers are not appliances, and are to be placed in either the scrap metal pile, or into the MSW, depending upon the amount of metal, plastic or other materials in them.
